Introduction

Calm v10.0.1 is a bug fix update release.

Installation and version

Customers installing Calm for the first time using v10.0.1 or upgrading an existing Calm implementation should use the installation executable called:

Calm1001.exe

This is available for download from the link publicised by Axiell.

Some versions of documentation refer to the original v10 release as v10, while others refer to it as v10.0. For all purposes, these should be treated as meaning the same thing. V10.0.1 will be used from now on for consistency.

The update should be installed using the instructions in the document ***Calm V10 Installation Upgrade Guide.pdf*** produced 12/02/15 and revised 30/03/15.

If you are installing v10.0.1 as a new clean installation, or if you are upgrading from v10.0 to v10.0.1 then you should follow the v10.0 installation instructions in the document. However, you do not need to run the update utility. This section can be ignored.

If you are upgrading from v9.x directly to v10.0.1 then you should follow all the v10 instructions in the document, including the update utility.

In all cases, we would recommend that customers use v10.0.1 rather than v10.0.

Once installed, the version of Calm will be displayed on the main menu as v10.0.1. This is the official version release number. Calm also has an internal build number. This has no functional meaning.

Changes

There are a number of changes and improvements in v10.0.1. Many of these are invisible to the user. Some issues resolved in v10.0.1 are:

XML export

This did not work in v10.0 and has now been fixed. It should now behave as it did pre v10.0.

Overview scroll

In v9.x and v10.0 there was a problem with the overview scrolling, where hitlists of greater than approx 60,000 records would not scroll properly, but rather jumped back to the top of the hitlist. This has been resolved now, so the hitlist scrolls from beginning to end of hitlist as expected.

Pasting text

Pasting large amounts of text into fields was sometimes causing Calm to crash.

Loan tickets

Location field not appearing on Archive loan tickets.

Ctrl-F5

Ctrl-F5 find next hit term in current record was not working.

CalmView v3.0 support

Customers running Calm v10.0 now have an upgrade path to the latest release of CalmView.

Support for Axiell Collections

Axiell Collections is a new staff web client being developed for Axiell collection management products. Information on the release date for the interface to Calm will be forthcoming but customers will require v10.0.1 to use this.
