

CALM AND CALMVIEW - BUGS/RFE LIST

This is a complete list of all bugs and Requests For Enhancement still open in our Calm Development Board in JIRA. If there is any bug or RFE not shown in this list and which you believe is still an issue, then please re-submit this through Hornbill. There are no other open bugs or RFEs. We hope that the brief descriptions are clear enough to allow you to understand what each issue refers to.

CALMVIEW

BUGS

402 - & in RefNo's and picklists in searches can cause searches to fail

396 - carousel pause/play buttons giving accessibility errors due to button being empty or has no value text

393 - slow tree generation, but think related to space and commas in refno

361 - underview column widths are not re-sizeable

360 - cannot change the label on the RefNo column header in results list

358 - carousel caption text does not display on mobile view

357 - transaction errors on images when Service restarted overnight?

355 - some tooltips are visible but cannot be changed

341 - the first session search including an ampersand error with 'There was a problem searching the database. The database may be down for maintenance. Please try again later.' If you re-do immediately after, it works fine.

339 - move the View Profile button on the Instagram card as it obstructs long Instagram usernames

338 - language flags not displaying

326 - log files are always installed to c:/xxx even though you can choose any location to install files

314 - when the Date field is added to CalmView 5 catalogue advanced search, searching on it sometimes brings back unreliable results as it either won't accept month names, won't accept ranges, or if the format dd/mm/yyyy is entered, it just does a wider search without finding the specific record.

311 - items in header cannot link to external sites or exist without a link

309 - want the Hierarchy Browser title to be changed to e.g. Full Catalogue List but cannot find it in configurator

305 - If the database searches are set up as separate menu items, rather than Catalogue as main then People as sub, clicking on one advanced search then highlights them all in the header. This can be confusing as you're on Advanced Search but you can't tell (other than via the URL) which search you're doing - catalogue/persons etc

298 - The IDs for the fields on the record display have a number of spaces after the name e.g. Notes<space><space><space><space><space>. This means that they cannot be used in CSS.

259 - Support for media files is inconsistent

- MP4 – plays in Chrome, Firefox and Android phone, but only displays MP4 logo in Edge, Explorer and Safari.
- PDF, PNG – displays all the time regardless of browser
- WAV, AVI, Office files – error cannot be loaded

RFEs

389 - alt text usually comes from various CalmView settings (either in the Configurator or in CalmViewRefreshConfig.xml). This appears to be alt text on the images that accompany each record. In the configurator, there is no way to set alt text from these images.

383 – upgrade Fancybox to v4

384 - give CV configurator access to the created date field

377 – enable the vocabulary field attribute if not already working

330 - The '+' in tree should not show at all if there are no available children records to view, may be a problem with records that exist but are set to filter out?

319 - add option to edit advanced.aspx page header if there is more than one database to search on

293- allow a custom link behind the logo

258 – differentiate between list and gallery view in Image Gallery

247 – enable the related record Calm feature in CalmView, actually think this works but the navigation when you switch, then look at the tree, gets confused or out of step

CALM

BUGS

401 – The linked data feature in Calm is no longer working

397- images.tcl file not being overwritten in Images database installer, giving a hitlist stack overflow error

395 – transfer to archive feature in Calm Records not generating the RecToArc.txt file

390 - when re-ordering the conservation fields Treatment, Materials and Conservator in the admin programme, the fields revert back when the describe service is restarted

368 – cursor does not display on record when you move between records using +/- on keyboard or browsing through overview, only works if you use the left/right arrow buttons on the toolbar

366 – intermittent problem in the Subjects database with creating terms, RecordCreate works using Alt-F10

356 – uploading images to Images database sometimes gives a hitlist stack limit error

352 - when clicking Location/Remove on a catalogue record, gives an error 'a record of type movement has not been defined'

350 - when viewing a catalogue record, click Authorities and there is no Linked Data button

332 - username+domain in Admin truncated if over 32 characters

324 - overview hitlist rendering / refresh issues whilst tree view is open. During testing of 11.0.8 the same issue occurred when pressing F12, creating a record using add below, create siblings or insert record. The hitlist appears to populate with random records from the initial search but on opening an entry it reverts back to the record which was originally at that position in the hitlist

306 - Calm is ignoring the 'failed login lockout' setting in the Admin program and appears to be hard-set to 3

301- issue hitlist gives tcl error

287 - When transferring an object record to conservation, it complains that the contents of the Item field are empty. This appears to be because it's trying to copy the contents of the catalogue record's Title field to the Item field on the conservation record

285 - synonym searching not working

277- add translation for new tabname.newlocation in locations database

276 - Click Current or NormalLocation button on left-hand menu in Locations db, but click cancel on the search box returns you to main menu.

147 - Administration>Parameters has a button, menubtn.UserParameters, which is not named correctly. Also, expiry days and expiry warning have no labels.

RFES

328 - can we choose the order we want items in picklists, rather than forced alphabetically by Admin

304 - issue hitlist in Loans

303 - print hitlist of tickets in Loans

302 - cancel loan regardless of loan status

274 - add a return to normal location button

196 - make .txt the default file type for DScribeNatural imports
